Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10, 14-17, are rejected under 35 U.S.C. 102(b) as being anticipated by US 5050570 (Thring).

Thring discloses a Stirling engine comprising a heater 102 (high temperature portion), a cooler 104 (low temperature portion), on column 6, lines 17-40, Thring explains that the hot portion wall is formed by heat resisting material such as ceramic, the cold portion is made from standard conducting material such as steel or aluminum, on column 6, lines 51-60, Thring describes that the material of the regenerator 20 is different from said hot and cold portions; figure 5 shows the connecting element 110 between hot and cold portions are made from different materials. Therefore, Thring meets the claimed invention in two ways 1) the heater, cooler, and regenerator are made from different materials, and 2) the heater, cooler and connecting element 110 are also made from different materials.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-13, 18-21, are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 5050570 (Thring). Thring discloses all the claimed subject matter as set forth above in the rejection of claim 1, but does not disclose different types of Stirling engines. However, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to utilize the housing with different materials of Thring in many different types of Stirling engines for the purpose of controlling the temperatures in said engines.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Examiner Nguyen whose telephone number is (571) 272-4861. The examiner can normally be reached on Tuesday--Friday from 12:30 AM to 10:00 PM.
